

Name _____

Date _____

Cellular Respiration!

Fill in the blanks below.

.....

Cellular respiration is the set of chemical reactions that break down _____ from our food into _____ or adenosine triphosphate. The ATP is _____ for the body. Cellular respiration requires _____ and _____ to start the cycle. Cellular respiration takes place in the _____ or "powerhouse" of the cells. They take in the Oxygen and glucose and turn it into _____, _____, and ATP. The Carbon dioxide and the water are the _____ of the reactions.

Resources required for cellular respiration

_____ and _____

Mitochondria

Output and byproducts

_____, _____, and _____
